

Cerulean launches new and improved smoking machine

March 2015

The new SM450i – Designed to perform in every detail.

Our new and improved linear smoking machine streamlines your cigarette testing with more automation, reliability and less operator input. Based on the successful SM450, the SM450i was developed using dynamic fluid simulation – ensuring the most effective and accurate smoking process with increased reproducibility. It automates warm-up cycling for greater efficiency, and CO calibration, lighter bar operation and air-flap actuation for greater consistency. There are built-in temperature and pressure sensors to eliminate CO compensation errors. Yet all these new features come in a smaller footprint than the SM450. Compliant with ISO3308, the 20-port SM450i smokes ISO, Canadian and Massachusetts methods, all with the same smoking throughput. The new SM450i – designed to perform in every detail.

For more information about the new SM450i, please visit cerulean.com/SM450i
