

Electronic Cigarette Testing Solutions

From Molins Cerulean

E-Cigarettes and Molins Cerulean

Molins Cerulean have over 30 year's experience in providing solutions to testing from tobacco to tube manufacture. Utilising this experience has allowed Molins Cerulean to design and develop testing solutions for the electronic cigarette industry including the first dedicated e-cig vaping machine.

Since the launch of Molins Cerulean's dedicated electronic cigarette tester, the CETI8, in September 2013 at TSRC (Tobacco Science Research Conference) in Williamsburg, Virginia, Molins Cerulean have continued to design and develop new testing equipment for electronic cigarettes.

Our aim is to provide testing solutions for our customers be it a standard item or a device that requires development to meet the requirements of routine or research analysis.

From the CRM81 compliant CETI8 vaping machine, to the pressure drop testing range of devices, Molins Cerulean has close links to the developing demands and future legislative requirements of manufacturers and distributors and strives to be at the forefront of testing equipment.

From attending e-cigarette conferences to Parliamentary group discussions, Molins Cerulean has close-ties to the industry and is a recognised contributor to e-cigarette testing.

The SM450e is a 20-channel e-cigarette testing machine with angled vaping, button activation and the capability to vape 4 different regimes. Complying to CRM81, the SM450e is an efficient way of testing e-cigarettes.

Molins Cerulean's E-cigarette History

September 2013:

Prototype CET18 displayed at TSRC (Tobacco Science Research Conference)

January 2014:

CET18 made commercially available

July 2014:

CET18 Mk2 launched following customer feedback

January 2015:

CET18 Mk3 launched to include push-button activation kit

February 2015:

EPD100 made commercially available

June 2015:

EPD200 made commercially available

August 2015:

CET18 Mk3 Angled vaping kit launched

January 2016:

ECT100 made commercially available

August 2016:

SM450e launched and commercially available
