

## Vape Product Testing Solutions

### VAPE PRODUCT TESTING AND CERULEAN

Cerulean have over 30 year's experience in providing solutions to testing from tobacco to tube manufacture. Utilising this experience has allowed Cerulean to design and develop testing solutions for the vape product industry including the first dedicated vaping machine.

Since the launch of Cerulean's dedicated vaping machine, the CET18, in September 2013 at TSRC (Tobacco Science Research Conference) in Williamsburg, Virginia, Cerulean have continued to design and develop new testing equipment for vape products.

Our aim is to provide testing solutions for our customers be it a standard item or a device that requires development to meet the requirements of routine or research analysis.

From the CRM81 compliant CET18 vaping machine, to the pressure drop testing range of devices, Cerulean has close links to the developing demands and future legislative requirements of manufacturers and distributors and strives to be at the forefront of testing equipment. Attending new generation product conferences and Parliamentary group discussions, Cerulean has close-ties to the industry and is a recognised contributor to vape product testing.

The SM450e is a 20-channel vape product testing machine with angled vaping, button activation and the capability to vape 4 different regimes. Complying to CRM81, the SM450e is an efficient way of testing vape products.

## CERULEAN'S VAPE PRODUCT HISTORY

### September 2013:

Prototype CETI8 displayed at TSRC  
(Tobacco Science Research Conference)

### January 2014:

CETI8 made commercially available

### July 2014:

CETI8 Mk2 launched following customer feedback

### January 2015:

CETI8 Mk3 launched to include push-button activation kit

### February 2015:

EPD100 made commercially available

### June 2015:

EPD200 made commercially available

### August 2015:

CETI8 Mk3 Angled vaping kit launched

### January 2016:

ECT100 made commercially available

### August 2016:

SM450e launched and commercially available

### September 2017:

Brand new vape product testing unit to be launched!
